

METHODS AND SYSTEMS FOR MANAGING
OUTPUTS TO PERIPHERAL DEVICES

ABSTRACT OF THE DISCLOSURE

A method for managing outputs to peripheral devices in medical systems devices is described. The method includes providing an instruction to provide an output, creating a data object based on the instruction, and storing the data object in a first memory if a peripheral device that provides the output is not available to accept the data object, where the first memory stores the data object for a longer term than a second memory.
